

# DWA\_04.3 Knowledge Check\_DWA4

---

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

**Naming: Using camelCase and PascalCase** - Helps with memorization and clean code for easier reading.

**Alignment: Follow specific alignment for Javascript syntax** - More organized code with less clutter. More presentable.

**Quotes: Always use double quotes (") for attributes, but single quotes (') for all other elements** - Prevents confusion between variables and specifications.

---

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

**Tags: Self-close tags that have no children** - Could lead to unnecessary confusion when going over your code.

**Declaration: Do not use displayName for naming components. Instead, name the component by reference.** - Could cause unnecessary problems if not done properly when the displayName method could be easier.

**Spacing: Do not pad JSX curly braces with spaces.** - I don't think this would be best because more spaces isn't necessarily a good thing since more spaces adds to readability of code.
